

TUNED PIPE

Several years ago I purchased an in-the-box Bryan Hebert Shinden from a friend. The Shinden was designed for either combustion power or electric. I decided to go the electric route. When I opened the box I found this tuned pipe. Since this is a pattern airplane I'm guessing the pipe is sized for 1.60 - 1.80 glow engine. It's never been used. The pipe itself is 16" long, the entire unit is 21" long and it is 1.25" in diameter. Give me a shout if you are interested.
